Claims 13-18, 21-27 are allowed over prior art.

Claims 10-12, 19-20 are canceled.

The prior art fails to teach and render obvious the features as claimed for a protection channel switching in an optical network in independent claims 16, 21, 26:

“comparing the priority value associated with the protection switch request message to the occupant priority value; and

“refusing the protection switch request when a bandwidth of the working channel to be switched is greater than an unoccupied portion of the protection channel and the request priority value of the protection switch request is less than or equal to the occupant priority value of the protection channel;

wherein refusing the protection switch request comprises pending the request so that if the unprotected traffic being transported through the protection channel subsequently releases the protection channel, a network element (NE) that issued the priority switch request is notified.”
